PROJECTS

BenkyoBox – Japanese Language Learning Platform *Next.js, React, Tailwind CSS*
Built a web application for learning and practicing Japanese through interactive study features. Developed the application using Next.js and React with a responsive interface using Tailwind CSS, and deployed it on Vercel.
Live Demo: https://benkyo-box-japanese-app.vercel.app

Offline Tanglish-to-Tamil Transliteration *React, Vite,*
Built an offline-first application that converts Tanglish text into Tamil script in real time. Added fuzzy matching to handle different phonetic spellings and used local storage to support offline usage.
Live Demo: https://tanglish-to-tamil.netlify.app

Offline Multi-Hop P2P Communication System *Java, Android SDK, Socket Prog, BATMAN Protocol*
Developed a decentralized MANET-based P2P messaging system enabling infrastructure-less communication across 10+ nodes using multi-hop routing.Implemented adaptive routing and fault-tolerant communication logic to handle node mobility and link failures, ensuring reliable delivery under 30% network disconnections.

CERTIFICATIONS & LANGUAGES

- **JLPT N5** – Japanese Language Course Completion Certificate, FITA Academy
- **Python for Data Science** – NPTEL
- **Languages:** Tamil (Native), English (Fluent), Japanese (Conversational), Hindi (Basic)
